Pharmaceutical impurities and primary reference standards 2015

detailed certificates of analysis • acknowledged by regulatory authorities worldwide • pharmaceutical impurities • custom synthesised impurities • pharmaceutical primary standards

Can't find an official pharmacopoeial standard?

Try our LGC primary reference standards produced under ISO Guide 34!

The FDA Guidance for Industry on 'Analytical Procedures and Method Validation' states:
"When there is no official source, a reference standard should be of the highest possible purity and be fully characterised."

LGC produces a certified range of pharmaceutical primary reference standards that fulfill FDA's and other regulatory body requirements. For maximum stability, all vials are filled under argon.

Download our catalogue 'Pharmaceutical impurities and primary standards' at www.lgcstandards.com and also ask for our custom manufactured primary standards!

The certificate of your primary standard from LGC includes:

Detailed identity information:

- Nuclear magnetic resonance (NMR) spectrum
- Infrared spectrum (IR)
- Mass spectrometry data (MS)

Detailed purity/assay data:

- Assay information by accredited technique, qNMR whenever possible
- Confirmation by orthogonal method, e.g. mass balance

Introduction

Welcome to the new edition of our pharmaceutical impurities and primary reference standards catalogue.

About LGC Standards

LGC Standards has successfully established a global reputation for the production of impurities, primary reference standards and working standards, and as a single source for the supply of pharmacopoeia reference materials. Our production site in Germany is accredited to ISO/IEC 17025 and ISO Guide 34.

Our menu of custom services, including custom synthesis of impurities and metabolites, characterisation, certification, packaging and distribution, adds value to the scientific support we provide to our pharmaceutical customers.

Our relationships with the world's leading pharmacopoeias and their range of Chemical Reference Substances (CRS) and Reference Standards (RS), combined with in-house production of certified reference materials and pharmaceutical impurities, enable us to meet our customers' specific needs. LGC is currently the exclusive distributor of ATCC cultures and biological products throughout Europe and specified countries on the continent of Africa.

LGC Standards' extensive network of sales offices and distribution centres means we offer the widest range of reference materials from one single source for rapid delivery. Our staff can provide scientific and technical guidance, including shipping and customs advice, in the local language. Our range of products also includes reference materials for clinical and forensic applications, phytochemicals, environmental analysis, physical properties determination, and food and beverage analysis.

For more information about our range of services, or to receive any of our catalogues, please refer to our website www.lgcstandards.com or contact your local office.

About LGC

LGC Standards is part of LGC. LGC, whose Science and Innovation division acts as the designated UK National Measurement Institute (NMI) for Chemical and Biochemical measurement, has a long history in the development and validation of analytical methods and the production of reference materials.

Many of the analytical methods, which cover the food, environment, industrial, clinical and pharmaceutical sectors, are accredited to ISO/IEC 17025 (Requirements for the competence of testing and calibration laboratories). Full details of the accreditation schedule can be found on the UKAS website (www.ukas.com).

LGC's Science and Innovation division is accredited to ISO Guide 34 (General requirements for the competence of reference materials producers) for the production of (certified) reference materials as is also our production site in Germany. The measurement capabilities used to produce certified reference materials in its capacity as the UK NMI are verified through participation on key comparison studies organised by the Consultative Committee for the Amount of Substance (CCQM) of the International Weights and Measures Organisation (BIPM). The certificates are recognised by other National Measurement Institutes, under the Mutual Recognition Arrangement.

In its role as the NMI, LGC serves on the International Organisation for Standardisation (ISO) Committee for Reference Materials (REMCO), which aims to carry out and encourage a broad international effort for the harmonization, production and application of certified reference materials (CRM).

About the catalogue

The first chapter of this catalogue comprises approximately 3,500 impurity and drug substance reference standards produced by LGC. The second chapter includes a selected range of primary reference standards which are produced under ISO Guide 34 and feature an even more detailed certificate of analysis. They fulfill the official requirements for primary standards of organizations such as the FDA, WHO and ICH.

Each product is accompanied by a detailed certificate of analysis (CofA), which gives information on the identity and purity, together with the various analytical methods and their conditions.

Examples of our comprehensive certificates are shown at the beginning of the impurities and primary standards sections.

Impurity standards

Impurities in a pharmaceutical substance can change the effects and side effects of a drug significantly. Therefore, it is important to have an accurate detection of impurities.

The pharmacopoeial monographs regulate the legal definition but also the analysis and the limits of impurities in a given substance. A wide range of known impurities is listed in individual pharmacopoeial monographs. A great number, however, of these standards are not actually available from the pharmacopoeias. The impurity standards produced by LGC serve to fill this gap to a large extent.

The increasing importance of impurity reference materials is also becoming apparent in the registration of drugs, where an exact identification and quantification of susceptible impurities is required for an assured documentation.

Limits for impurities have been laid out in compendial monographs, in specifications from the manufacturer internally or in the International Conference on Harmonisation (ICH) Guidelines which have been agreed by Europe, Japan and the United States. The ICH has published four guidelines on impurity issues:

ICH Q3A (R1): Impurities in New Drug Substances

ICH Q3B (R2): Impurities in New Drug Products

ICH Q3C (R5): Impurities: Guideline for Residual Solvents

ICH Q3D: Impurities: Guideline for Metal Impurities

The full wording of the ICH guidelines is available at the official website of the ICH: www.ich.org. The ICH guidelines on impurities were originally developed for new, original drug substances and products. However, it is now commonly agreed in the three ICH regions – by FDA, EMA and Japanese regulation documents – that these guidelines need to be applied to generic compounds as well, in addition to the pharmacopoeial monographs.

LGC impurity standards are thoroughly tested chemical reference substances and are used for reliable identification and quantification of impurities in pharmaceutical ingredients and products. They are also valuable tools for spiking experiments during validation studies of specificity and accuracy of analytical methods.

The abbreviations EP, Pharmeuropa, BP and USP in the article description indicate that the particular substance is mentioned as an impurity in that particular compendial publication. They do not indicate that certain specification of reagents or drug substances mentioned in the publications are fulfilled.

The standards – where they are actually listed as reagents or drug substances – may fulfill this specification, but this is not the intention and is not certified on the CofA.

Primary reference standards

Primary standards can be obtained from an officially recognized source, such as the pharmacopoeias. However, when there is no official reference standard for a given purpose, materials from other sources can be used. LGC Standards has produced and certified a new range of primary standards that fulfill ICH's, FDA's and other regulatory bodies' requirements for pharmaceutical quality control.

Our primary standards are manufactured under ISO Guide 34 and come with the most detailed certificate of analysis which includes identity checks by several qualitative techniques. Assay information is provided by an accredited technique (qNMR whenever possible), and the assay is confirmed by a second independent method (e.g. mass balance).

Controlled substances

A number of the pharmaceutical substances described in this catalogue, such as narcotics and tranquillisers, are substances controlled by German legislation. You will find such substances marked in the catalogue with a 'CS' in the corresponding column (after the column featuring the CAS number).

The purchase, possession and use of controlled substances are subject to national and international regulations designed to limit their abuse. It is the responsibility of the customer to obtain any authorization necessary to both purchase and possess controlled substances, complying with the laws of the importing country, before ordering.

Customers wishing to obtain controlled substances must contact their LGC Standards sales office before ordering, and clarify with the sales specialists the relevant national requirements, the associated charges and consequential delivery times. All orders for controlled substances must be provided in writing and signed by an authorised person. The orders must be accompanied with the original import permit and/or possession permit.

Use, safety and handling

Some pharmaceutical substances are toxic and require special handling. Virtually all pharmaceutical reference substances have a pharmacological and/or biological activity. We therefore recommend that all the products described in this catalogue should be handled as if they were bio-active, toxic or infective, and that opened packs should only be handled by trained laboratory personnel. We also strongly recommend to read the information provided by material safety data sheets coming with our products.

All pharmaceutical reference substances and standards are for laboratory analytical use only and not for use in humans.

How to buy from LGC Standards?

LGC is the most comprehensive source of reference materials, offering more than 100,000 for online ordering at www.lgcstandards.com. Once registered, you will also be able to view pricing and place orders. Alternatively, please feel free to contact our local offices worldwide for product information and prices. All contact details are given on the back cover of this catalogue.

General ordering information

The majority of products mentioned in this catalogue are available from stock; others may have a delivery time of approximately four weeks. For substances marked with 'request' in the column featuring the unit size, longer delivery times may apply. For custom synthesis, the time is estimated from previous experience. Customers will be notified if unforeseen complications arise during the synthesis. In the unlikely event that a synthesis does not reach the expected result, LGC Standards reserves the right to cancel the order.

Please note that once delivered to the customer, reference substances are not returnable. Customers requiring assistance with the purchase, use or application of a particular reference substance should contact LGC Standards where technical staff are available to advise on the use and suitability of the products.

Forensic toxicology and clinical schemes

LGC Standards is accredited to ISO/IEC 17043 for the provision of external quality assurance (EQA), or proficiency testing (PT) schemes.

Drugs of Abuse Schemes

- Drugs of Abuse in Urine (DAU)
- Drugs of Abuse in Oral Fluid (DOF)
- Drugs of Abuse in Hair (DAH)*

Forensic toxicology and clinical schemes

- **QUARTZ:** Forensic Toxicology scheme containing whole blood samples spiked with drugs and metabolites for both identification and quantification (including ethanol). The Alcohol Technical Defence (ATD)* Case Scenario enables practitioners to demonstrate on-going competency in performing back-calculations.
- **Toxicology (TOX):** Samples for analysis of single analytes or combinations of ethanol, paracetamol, salicylate, carboxyhaemoglobin, toxic alcohols, GHB and other named drug samples.
- **Therapeutic Drug Monitoring (TDM):** Lyophilised material (serum/urine) containing therapeutic drug and metabolite combinations at a range of concentrations. Drugs types include anti-epileptic, psychoactive, cardiac, treatment of substance disorders, smoking related drugs, and antibiotics.
- **ASI- Immunosuppressants*:** Samples for analysis of ciclosporin, tacrolimus, sirolimus, everolimus and mycophenolate.

*currently not included in our scope of accreditation.

CERTIFICATE

Reference Substance

4-Methoxy-2-[[[5-methoxy-1H-benzimidazol-2-yl)sulphonyl]methyl]-3,5-dimethylpyridine 1-Oxide (Omeprazole Sulphone N-Oxide)

Molecular Formula: C₁₇H₁₉N₃O₅S
Molecular Weight: 377.42
CAS Number: [158812-85-2]

Catalogue Number: MM0095.16
Lot Number: 15573
Long-term Storage: 2 to 8 °C, dark
Appearance: white solid
Melting Point: 185 °C (dec.)
Assay 'as is': 99.2 %

Date of shipment:

This certificate is valid for two years from the date of shipment provided the substance is stored under the recommended conditions.

Certificate of analysis - impurities reference materials

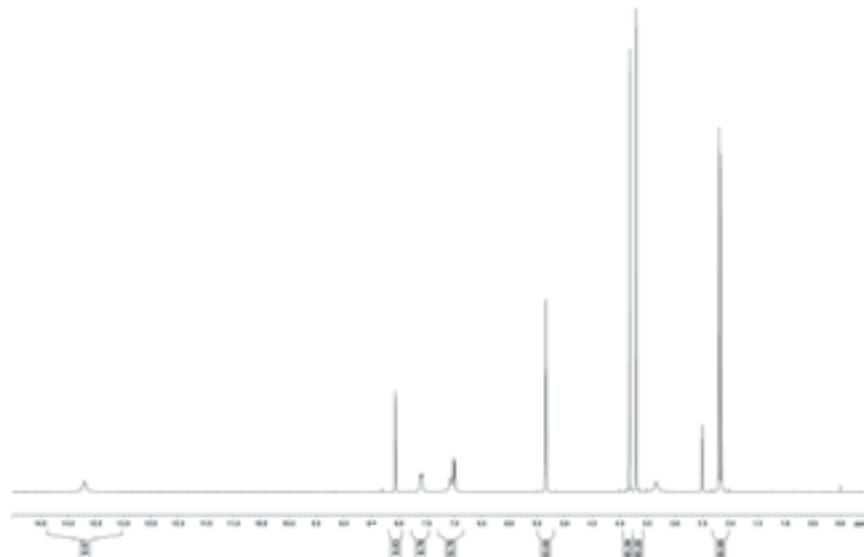

I. Identity

The identity of the reference substance was established by following analyses.

la. $^1\text{H-NMR}$ Spectrum

Conditions: 400 MHz, DMSO-d₆

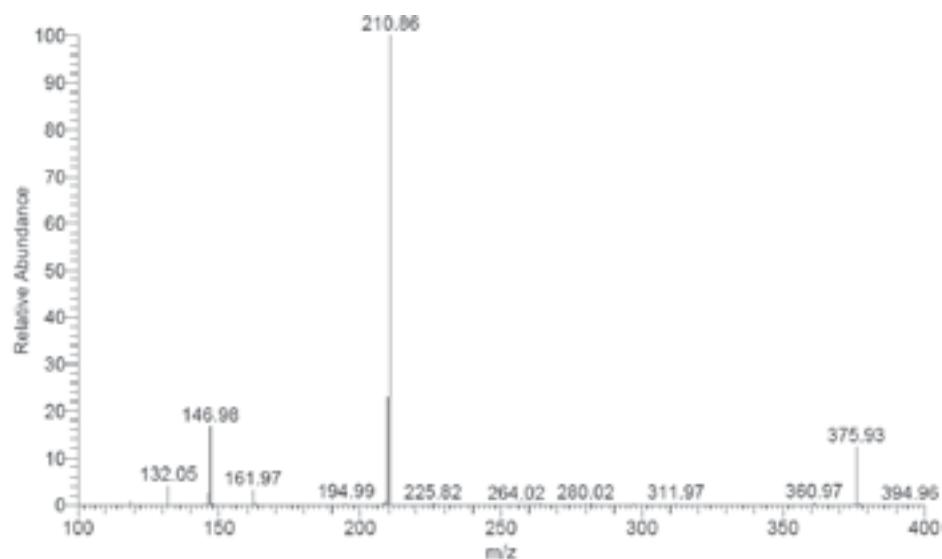

The structure is confirmed with the signals of the spectrum and their interpretation.

Certificate of analysis - impurities reference materials

Ib. Mass Spectrum

Method: 4.5 kV ESI; vaporization temperature: 200 °C, direct inlet

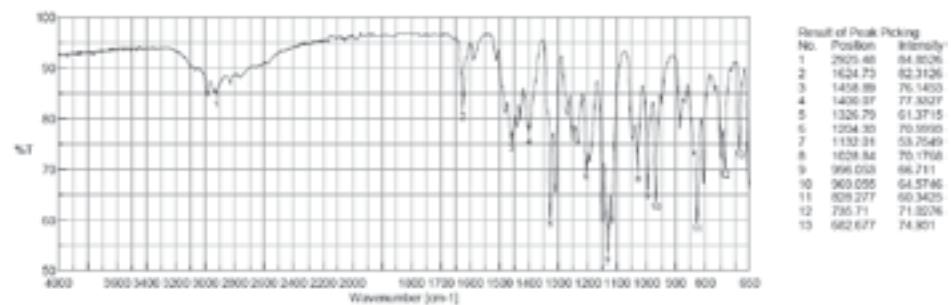

m/z	fragments
376	[M – H]
211	[C ₈ H ₇ N ₂ O ₃ S]
147	[C ₈ H ₇ N ₂ O]

The signals of the mass spectrum and their interpretation are consistent with the structural formula.

Certificate of analysis - impurities reference materials

Ic. IR Spectrum

Method: Attenuated Total Reflection Fourier Transform Infrared (ATR-FTIR) Spectroscopy

The signals of the IR spectrum and their interpretation are consistent with the structural formula.

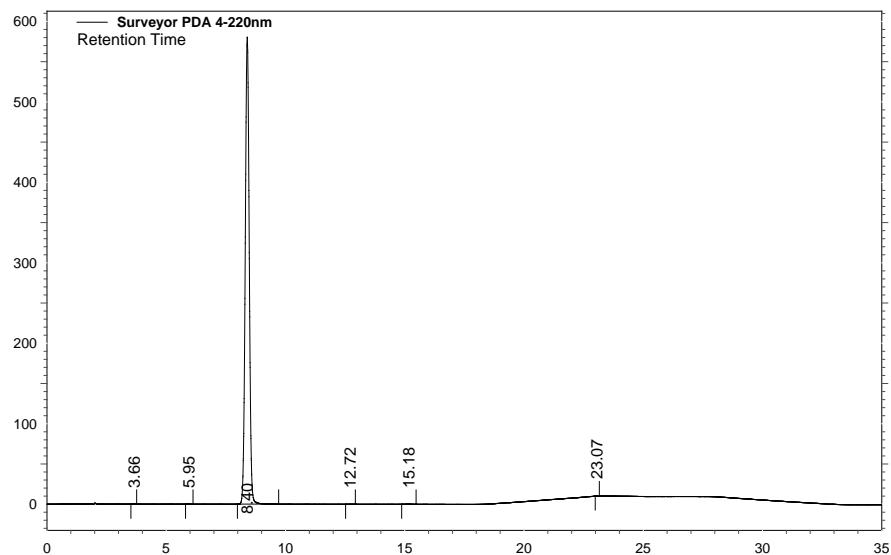

II. Purity

The purity of the reference substance was analysed by high performance liquid chromatography (HPLC).

HPLC Conditions:

Column:	Conditions:	Detector:	Injector:
Hypersil Gold (C18) 5 µm, 150 x 4.6 mm	1.0 ml/min, 40 °C 0 – 15 min Water/Acetonitrile 80/20 15 – 20 min Water/Acetonitrile to 60/40 20 – 25 min Water/Acetonitrile 60/40 25 – 30 min Water/Acetonitrile to 80/20 30 – 35 min Water/Acetonitrile 80/20 (v/v); 0.1 % H ₃ PO ₄	DAD 220 nm	Auto 5 µl; 0.0654 mg/ml in Water/Acetonitrile 50/50 (v/v)

Certificate of analysis - impurities reference materials

Area Percent Report - Sorted by Signal

Pk #	Retention Time	Area	Area %
1	3.66	1422	0.02
2	5.95	2481	0.04
3	8.40	6745401	99.85
4	12.72	1480	0.02
5	15.18	3383	0.05
6	23.07	1693	0.03
Totals		6755860	100.00

For the calculation the system peaks were ignored. The content of the analyte was determined as ratio of the peak area of the analyte and the cumulative areas of the purities, added up to 100 %.

Results:

Average 99.85 %
Number of results n=3
Standard deviation 0.01 %

Certificate of analysis - impurities reference materials

III. Water Content

Method: Karl Fischer titration

Results:

Average	0.20 %
Number of results	n=3
Standard deviation	0.01 %

IV. Residual Solvents

Method: $^1\text{H-NMR}$

Result: 0.46 % Chloroform
0.04 % *n*-Hexane

V. Final Result

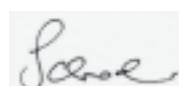

Total impurities (HPLC)	0.15 %
Water content	0.20 %
Residual solvents	0.50 %
Assay (100 % method) ¹	99.15 %

The assay is assessed to be 99.2 % 'as is'

The assay 'as is' is equivalent to the assay based on the not anhydrous and not dried substance respectively.

Release Date: 2012-05-24

LGC GmbH

Dr. Sabine Schröder
Product Release

¹ The calculation of the 100 % method follows the formula:

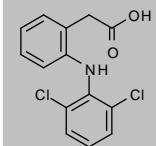

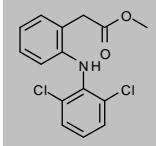

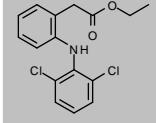

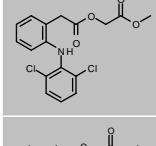

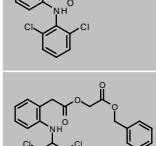

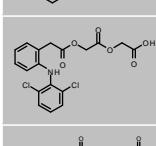

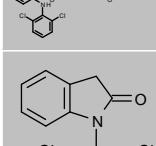

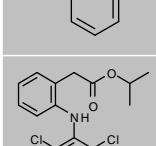

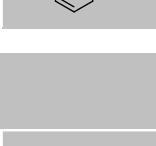

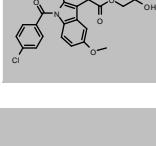

$$\text{Assay (\%)} = (\text{100 \%} - \text{KF} - \text{RES}) * \frac{\text{Purity HPLC (\%)}}{100 \%}$$

Water (KF) and Residual solvents (RES) are considered as absolute contributions, HPLC purity is considered as relative contribution.

Primary standards

 @LGCStdsPharma

www.lgcstandards.com

3,500 impurities from Atorvastatin to Zopiclone

LGC offers over 3,500 reference standards for impurities to support the pharmaceutical industry worldwide

- Acknowledged by regulatory bodies
- Impurities linked to the European Pharmacopoeia (Ph. Eur.) wherever possible
- Customised pharmaceutical impurities
- Additional documentation on request
- Assistance in finding the right material to suit your analyses

www.lgcstandards.com • Science for a safer world

 @LGCStdsPharma

Certificate of analysis - primary reference materials

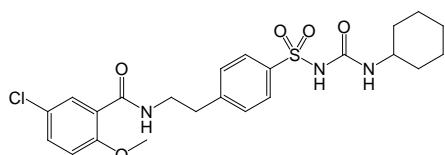

Certificate of Analysis

LGC Quality

ISO Guide 34:2009
DAkkS D-RM-14176-01-00
ISO/IEC 17025:2005
DAkkS D-PL-14176-01-00
ISO 9001:2008
DQS 102448 QM08

Primary Reference Standard

Glibenclamide

Molecular Formula: C₂₃H₂₈ClN₃O₅S
Molecular Weight: 494.00
CAS Number: [10238-21-8]

Catalogue Number: LGCQUANT0008.00

Lot Number: 25894

Long-term Storage: 15 to 25 °C, dark

Appearance: white solid

Melting Point: 172 °C

Assay¹ 'as is': 99.7 %

Uncertainty² U: 0.4 %

Date of shipment:

This certificate is valid for one year from the date of shipment provided the substance is stored under the recommended conditions.

¹ The value is based on the results of analytical techniques. Calibration and verification were carried out with standards traceable to SI-units. The value is expressed on an "as is" basis.

The identity is verified by data from international scientific literature.

² The uncertainty "U" is the expanded uncertainty estimated in accordance with the Guide to the Expression of Uncertainty in Measurement (GUM). It is corresponding to a level of confidence of about 95 %. Coverage factor k = 2.

Certificate of analysis - primary reference materials

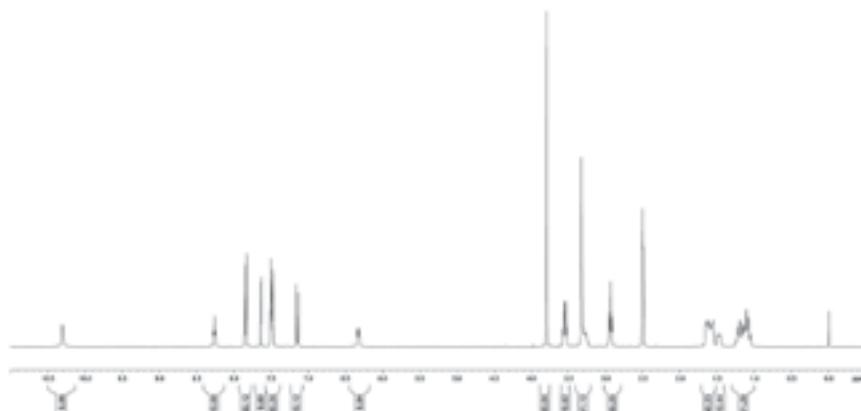

I. Identity

The identity of the reference material was established by following analyses.

Ia. $^1\text{H-NMR}$ Spectrum

Conditions: 400 MHz, DMSO-d₆

The signals of the NMR spectrum and their interpretation are consistent with the spectrum of EP reference substance Glibenclamide CRS, G0325000, Batch 3.0, Id00DQP3.

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

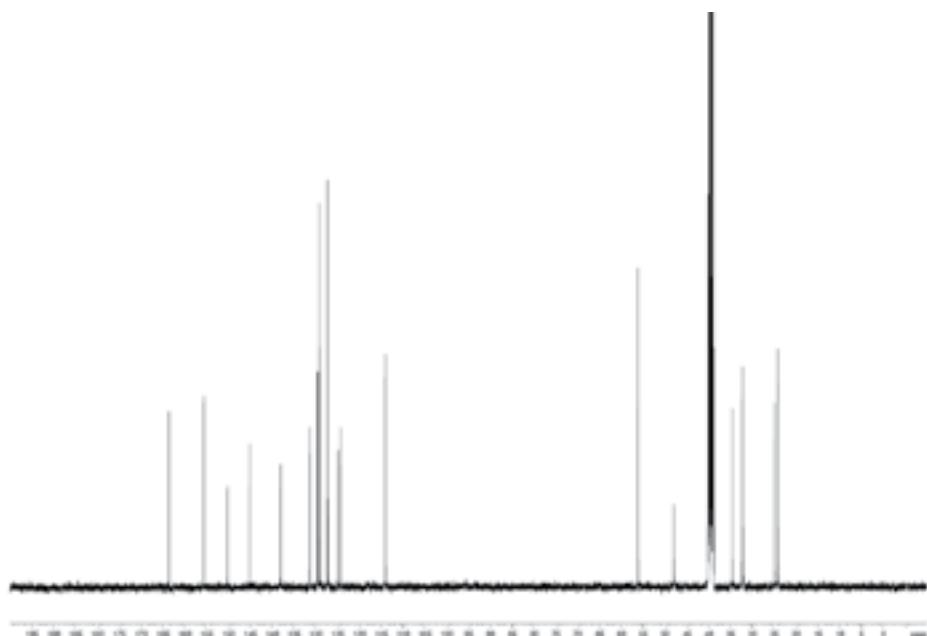

page 2/10

Certificate of analysis - primary reference materials

Ib. ^{13}C -NMR Spectrum

Conditions: 100 MHz, DMSO-d₆

The signals of the NMR spectrum and their interpretation are consistent with the spectrum of EP reference substance Gilbenclamide CRS, G0325000, Batch 3.0, Id00DQP3.

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

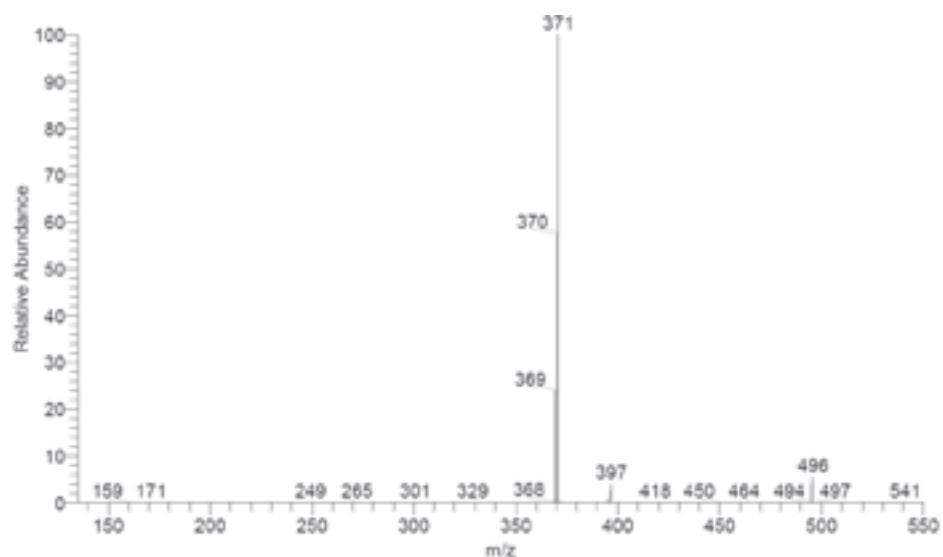

page 3/10

Certificate of analysis - primary reference materials

Ic. Mass Spectrum

Method: 4.5 kV ESI; vaporization temperature: 200 °C, direct inlet

The signals of the MS spectrum and their interpretation are consistent with the spectrum of EP reference substance Glibenclamide CRS, G0325000, Batch 3.0, Id00DQP3.

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

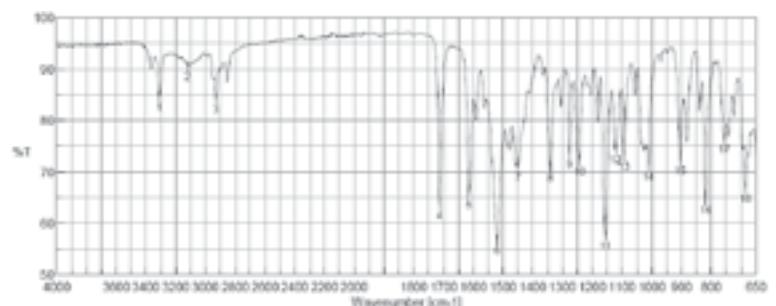

page 4/10

Certificate of analysis - primary reference materials

Id. IR Spectrum

Method: Attenuated Total Reflection Fourier Transform Infrared (ATR-FTIR) Spectroscopy

The signals of the IR spectrum and their interpretation are consistent with the spectrum of EP reference substance Glibenclamide CRS, G0325000, Batch 3.0, Id00DQP3.

Ie. Melting Point

Method: Capillary Method

Arithmetic mean (n=3): 172 °C

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

page 5/10

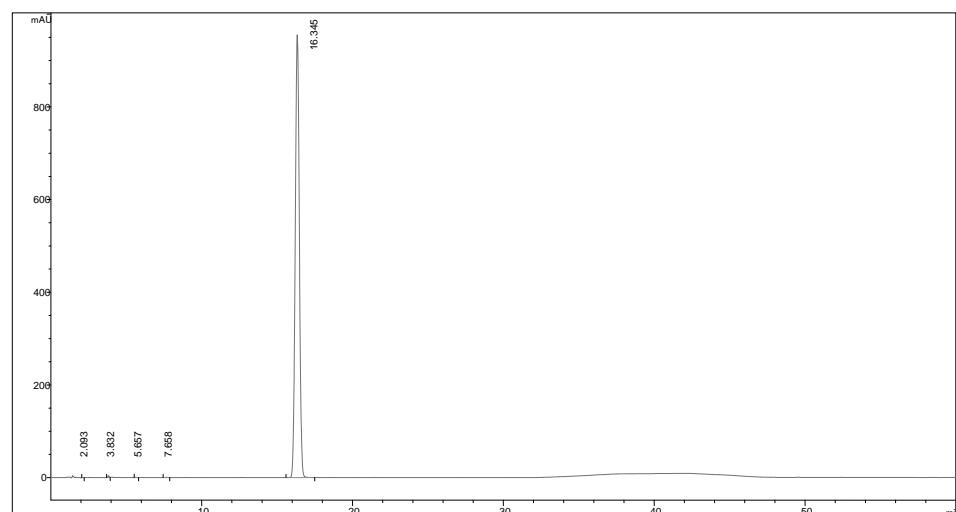

Certificate of analysis - primary reference materials

II. Purity

The purity of the reference material was determined by high performance liquid chromatography (HPLC).

HPLC Conditions:

Column:	Conditions:	Detector:	Injector:
Pro C 18 RS 5 µm, 150 x 4.6 mm	1.0 ml/min, 40 °C 0 – 30 min Water/Acetonitrile 55/45 30 – 35 min Water/Acetonitrile to 30/70 35 – 40 min Water/Acetonitrile 30/70 40 – 45 min Water/Acetonitrile to 55/45 45 – 60 min Water/Acetonitrile 55/45 (v/v); 0.1 % H ₃ PO ₄	DAD 230 nm	Auto 5 µl; 0.19764 mg/ml in Methanol

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

page 6/10

Certificate of analysis - primary reference materials

For the calculation the system peaks were ignored. The content of the analyte was determined as the ratio of the peak area of the analyte and the cumulative areas of the purities, added up to 100 %.

Results:

Average	99.80 %
Number of results	n=6
Standard deviation	0.01 %

III. Loss on Drying

Conditions: 105 °C for 4 h, EP 7.6 (2.2.32)

No significant amounts of volatile contents were detected (< 0.05 %).

IV. Sulphated Ash

Method: EP 7.6 (2.4.14)

According to the available data, the presence of inorganic impurities in the reference substance others than those detectable by sulphated ash is highly unlikely. The test for sulphated ash (Method: EP 7.6, chapter 2.4.14) resulted in values below the set specification of 0.1 %. Therefore, no assay correction was performed for inorganic impurities.

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

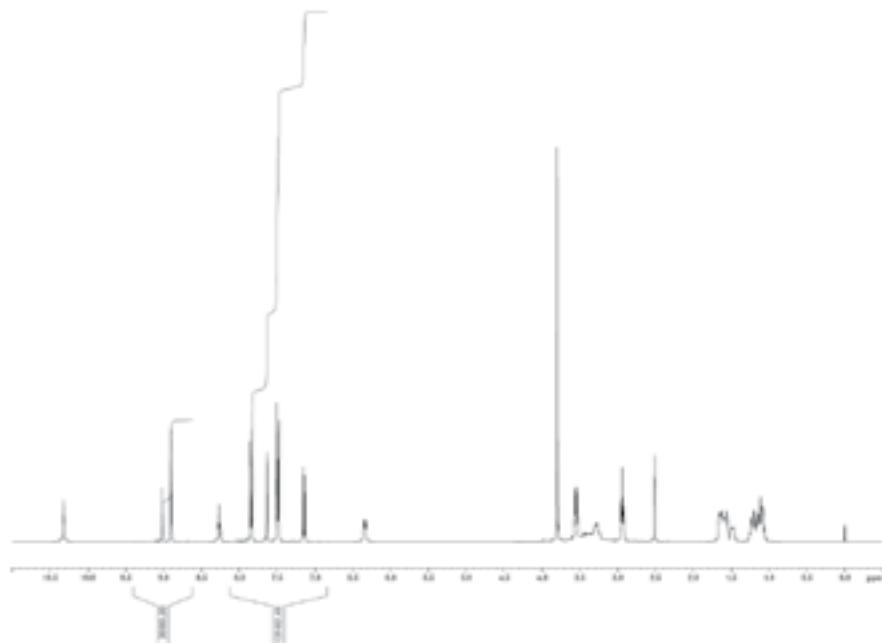

page 7/10

Certificate of analysis - primary reference materials

V. Assay by quantitative NMR spectroscopy

The assay of the reference substance was established by quantitative NMR spectroscopy using DMSO-d₆ as the solvent and with 3,5-Dinitrobenzoic acid (certified reference material, signal 8.62 – 9.40 ppm, 3 H) as internal standard.

Results:

Average	99.67 %
Number of results	n=6
Uncertainty U (expanded)	0.40 %

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

page 8/10

Certificate of analysis - primary reference materials

VI. Final Result

Chromatographic purity (HPLC)	99.80 %
Loss on drying	n. d. (not detected)
Sulphated ash	n. d. (not detected)

Assay:

Quantitative NMR spectroscopy	99.67 %
-------------------------------	---------

The assay is assessed to be 99.7 % 'as is'

The assay 'as is' is equivalent to the assay based on the not anhydrous and not dried substance respectively. It is determined by quantitative NMR spectroscopy and its expanded uncertainty ($k = 2$) is 0.4 %.

The assay is verified by the 100 % method (HPLC): 99.8 % which is inside the expanded uncertainty of the assay by quantitative NMR spectroscopy.

VII. Stability and Homogeneity

Accelerated stability studies indicate no significant instability. The given validity period is based on this data. This is backed up by additional stability testing and historical data over the range of several years. Homogeneity assured by qualified process of preparation, verified by homogeneity testing.

VIII. Further Information

General

For laboratory use only. Not suitable for human or animal consumption.

This material conforms to the characteristics of a primary standard as described within ISO Guide 30 (Terms and definitions used in connection with reference materials).

The values quoted in this certificate are LGC's best estimate of the true values within the stated uncertainties and based on the techniques described in this certificate.

The production of this reference material was realized taking into account the principles of ISO Guide 34.

LGCQUANT0008.00 Lot Number 25894

LGC GmbH, Im Biotechnologiepark, TGZ II, D-14943 Luckenwalde, Germany

page 9/10

Certificate of analysis - primary reference materials

Intended Use

Use for identification and quantification.

Handling of the RM

Before usage of the reference material, it should be allowed to warm to room temperature.

Assay and uncertainty

The identity and the assay are assessed by an ISO/IEC 17025 accredited testing method.

The calculation of the 100 % method (HPLC) follows the formula:

$$\text{Assay (\%)} = \frac{(100 \% - \text{LOD})}{100 \%} * \frac{\text{Purity HPLC (\%)}}{100 \%}$$

Volatile contents are considered as absolute contributions, HPLC purity is considered as relative contribution.

Uncertainty of the assay is expressed as an expanded uncertainty in accordance with ISO/IEC 17025 at the about 95 % level of confidence.

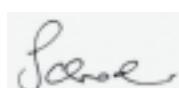

For quantitative applications use the assay as a calculation value on the as is basis. The uncertainty of the assay can be used for estimation/calculation of your own measurement uncertainty.

Quality Control Assessment

The product quality is controlled by regularly performed quality control tests (retests).
